01 · THE PROBLEM

Almost every “factory” still runs on paper and chat apps.

ERP EXISTS ONLY ON OFFICE PCS AND MONITORS

✓ The ERP sits on a desk in the office — it books the ledger after the month closes, and scores compliance after the audit.

✗ Nobody built the layer where the daily work starts — where workers, managers, the corporate office and the customers work together on one platform. Today that layer is e-mail, WhatsApp, WeChat and Telegram.

1 · THE BRANDS

Buyers are adopting Ai-native platforms for sales, distribution and sustainability — and the factory answers with an Excel sheet e-mailed on Friday. No live data, no plug-in, no order.

2 · THE GOVERNMENT

Government is digitalising fast — taxation, employment, customs documentation, sustainability compliance, environmental data. It wants real data, fast, and penalises late. The factory still files by hand.

3 · THE SOCIETY

The country is converting into a digital economy and the public is adopting a digital way of living — while the factory still works the 1980s way: ledger books and chat apps nobody can search.

4 · ASEAN CHALLENGE

Vietnam, Thailand, Indonesia, the Philippines — even China — want to win the soft-goods industry back with Ai-native technology. A Cambodian factory that stays analogue loses the order to the neighbour that didn't.

02 · THE MARKET OPPORTUNITY

Every business in Cambodia is a Yai customer. We start with the biggest 1,700 factories.

Our serviceable market: 1,700 soft-goods exporters · 5,000 non-manufacturing businesses · 6,000 small factories.

1,700

EXPORT GARMENT ·
FOOTWEAR · BAG FACTORIES

LAND — THE 1,700 EXPORTERS

Garment, footwear and travel-goods factories, 100+ workers each, buyer-audited and already paying for compliance. Yai's home ground: 14 agents, 70+ apps, the full department suite from day one.

5,000

NON-MANUFACTURING
BUSINESSES

LADDER — 5,000 NON- MANUFACTURING

Hotels, restaurants, retail, schools, hospitals and offices run the same departments — HR, admin, purchasing, accounts, compliance. Same agents, no factory floor needed. No new product to build.

6,000

SMALL FACTORIES

PHONE-FIRST — 6,000 SMALL FACTORIES

Workshops and sub-contractors with no IT staff and no desk. No dashboard, just the chat: Yai Lite from a phone, one agent at a time, in Khmer. The tail is where the volume is.

Targets drawn from: 703,642 non-manufacturing businesses (NIS Economic Census 2022) · 43,970 SMEs (MISTI 2024) · 1,682 garment factories (MISTI 2025).

03 · WHY NOW

Brands are going Ai-native. Government is going digital. The country — and ASEAN — cannot stay in the 1980s.

Our mission: bridging the gap between Ai-driven brands, digital-first government initiatives, and ASEAN's rapid transformation into a fully digital ecosystem.

1 · THE BRANDS

Buyers are re-tooling for Ai-native design and distribution, and sustainability now has a date — EU Digital Product Passport 2027, US UFLPA traceability, Higg live scoring. No live data, no vendor slot.

2 · THE GOVERNMENT

Cambodia's digitalisation is under way — GDT e-filing, customs, environment returns, labour data — submitted digitally, on time, or penalised. Compliance now means being digital.

3 · THE SOCIETY

Workers live on phones, ministries run portals, buyers audit online. A factory on ledger books is a 1980s factory inside a 2026 supply chain.

4 · ASEAN CHALLENGE

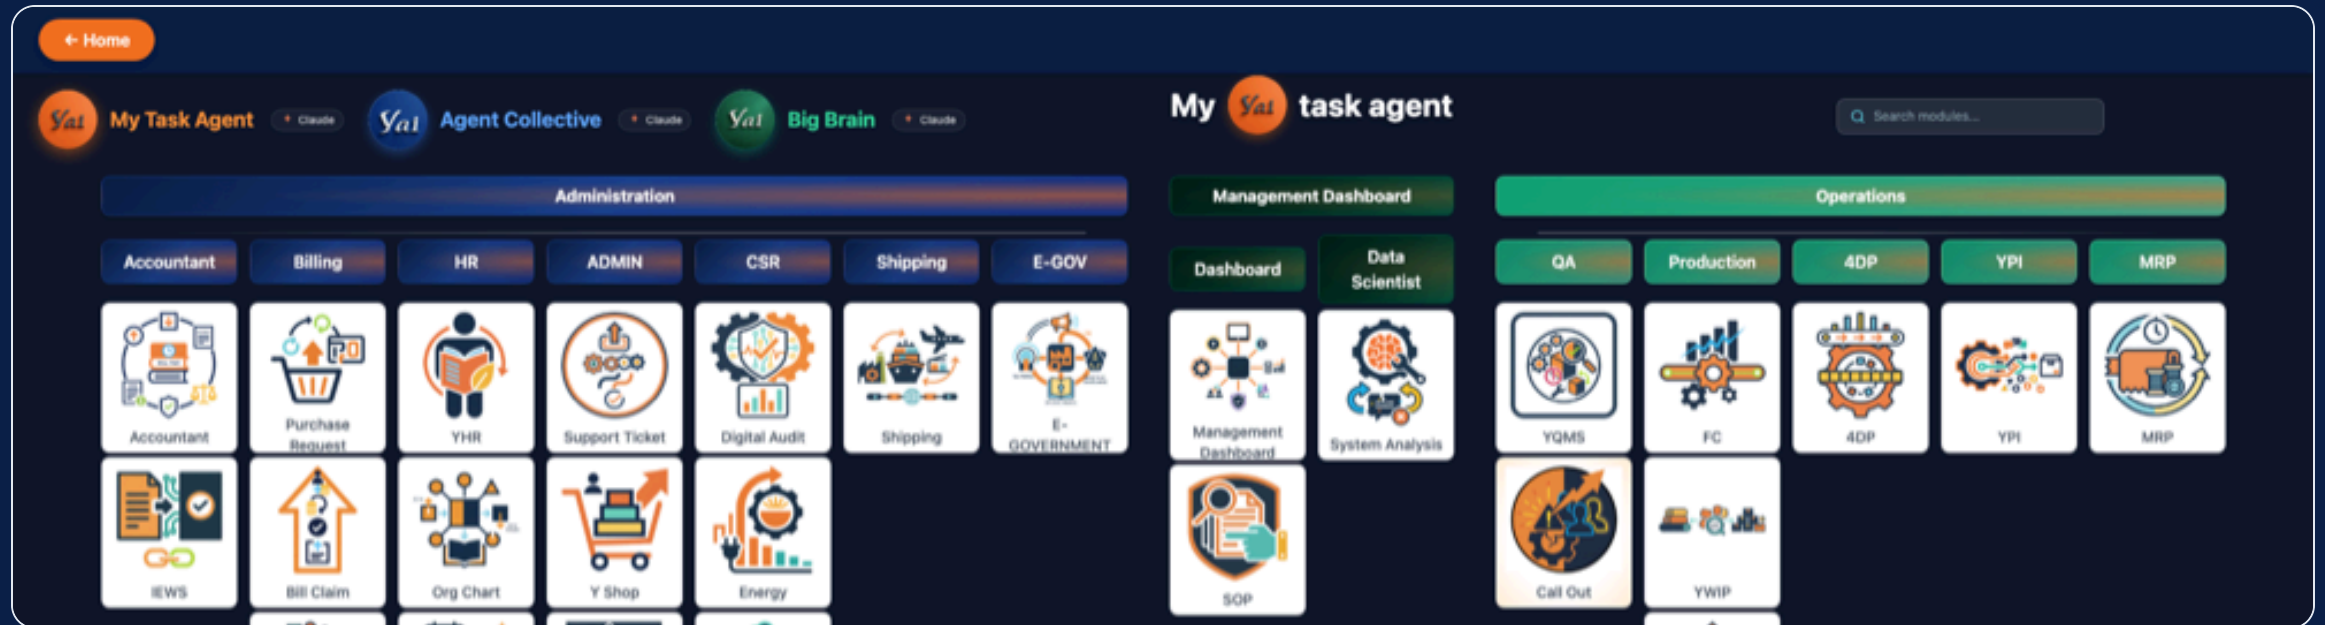

Vietnam, Thailand, Indonesia, the Philippines — even China — are using Ai-native technology to take the soft-goods industry back. Modernise now, or be modernised out of the order book.

This is the time. The factory that installs Ai in 2026 has two years of trained data when the buyer requires it in 2028. The one that starts in 2028 starts from zero.

04 · THE SOLUTION

Ai-Native Apps · Ai Agentic Support · Ai Big Brain for Management · AIoT for Transparency.

1 · AI-NATIVE APPS

70+ apps handle the daily tasks

2 · AI AGENTS

14 agents support each department

3 · AI BIG BRAIN

for management · 3 matters a day

4 · AIoT FEEDS

transparency · sensors · CCTV

Yai owns the floor — ERPs own the ledger, Yai owns where the day's work starts. Every answer feeds the factory's own memory.

05 · WHO IT SERVES

One system. Six people. Everyone on the same page.

1 · WORKER

Ai motion and workplace analysis guides material, machine and safety — and smooth, effortless motions. All admin support on their phone, any time — even their pay account.

2 · SUPERVISOR

No more hunting through books or stressing over numbers — Ai planning takes the stress off the floor. Your own data feed: just ask on phone, pad or TV, there at a glance.

3 · MANAGER

No more Excel, Word, e-mails and meetings — still chasing the information production and sales need. Fear no more: the entire Ai management capability in your hand, on your screen.

4 · OWNER

Tired of chasing managers? Ai Big Brain knows everything — your own internal ChatGPT, Claude or Gemini. Out of public chats and Excel: your business intelligence, secured on your desk.

5 · BUYER

A brand's Ai platform is pointless if its manufacturers aren't ready. Yai integration closes that gap — live quality, capacity and sustainability data straight from the floor.

6 · GOVERNMENT

Compliance, tax, labour relations, customs and control, industry relations — backed by AIoT data feeds. 70+ apps in your hand and Ai agents in action keep every ministry's data ready.

06 · TRACTION TO DATE

Five years live. Five factories. Zero paid acquisition.

07 · PRODUCT ROADMAP

Two stories, one timeline: what we build — and who runs on it.

08 · THE CURRENT LANDSCAPE

Who it's for — and where the gap is.

	WHAT THEY BUILT	WHAT THEY MISSED	THE GAP YAI FILLS
ERPs — global and local	One app, a few functions — impossible to integrate.	No industry experience — they don't understand the real issues of soft goods.	Built from 80 years inside the industry: Arnold (founder) and Gamini (CTO) — see the team.
Excel · Word · E-mail · WhatsApp <i>⚠ Bye bye business intelligence</i>	Free, familiar — and now every app is Ai-integrated.	Ai-integrated means your business data goes out in public. Public Ai platforms are hungry for proprietary data.	Yai data stays right on your desk — on a GX10, well secured.
Worldly · ITS · BV · SGS · ILO · BSCI · WRAP	Platforms to upload data and report.	Just reporting — they don't guide or help the factory on the topic itself.	Yai guides the factory every day — live floor data, and the report writes itself.

09 · BUSINESS MODEL

A ladder, not a licence. Every dollar spent at step one still works at step six.

THIS IS HOW IT STARTS

\$120 → \$1,200/yr

Cloud — small business to large factory.

Starter

5 seats

Growth

300 users

Enterprise

1,000 users

THEN IT ESCALATES TO AI AGENTS

\$2,500 → \$15,000

Everything activated, right in front of you.

Ai server

Ai agents

real task officers

Big Brain

the big boss knows all

THEN CORPORATE LEVEL

\$5,000 → \$15,000

Corporate — multi-continent, multi-market.

Drones · Robots

they watch while others sleep

AAIoT

Advanced AIoT

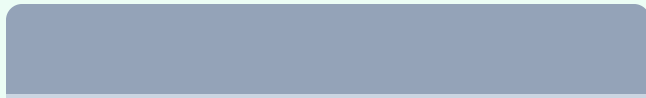

10 · PATH TO THE TARGETS

The same three steps — on a timeline.

Proof: 21 factories started on cloud apps in May 2026 — the first of them move up to Ai agents in Q1 2027. **Step 1 → step 2 in about 9 months.**

THIS IS HOW IT STARTS

~\$100K_{ARR}

2024–2026

21+ factories + non-garment
Cloud apps · Starter → Enterprise

THEN IT ESCALATES TO AI AGENTS

~\$0.5M_{ARR}

2027–2028

100 factories
Ai server · 14 agents · Big Brain

THEN CORPORATE LEVEL

~\$3M_{ARR}

2028–2030

500 factories + ASEAN
Multi-continent · drones · robots · AAIoT

Illustrative recurring revenue. How we get there: TAFTAC, SBC and CambodiaTrade member events in Cambodia; Enterprise Singapore for the region — introductions, not cold outreach.

11 · THE ASK

Raising **US\$3M** seed round to take Yai from 21 factories to a hundred.

ALLOCATION	%	WHAT IT UNLOCKS
1 · Development hardware	45%	Ai development on Mac M5 / M6 · more GX10 Ai servers and GPU docks · AIoT upgrades
2 · Events and promotion	25%	Events in Cambodia, Singapore and Hong Kong
3 · City office	15%	City office setup in Phnom Penh
4 · Yai's own factory	15%	Start planning Yai's own manufacturing facility — fully running on the Yai platform

FOUR MILESTONES

1. 100 paying factories in Cambodia
2. Anthropic Partner Network confirmed
3. Layer 3 live at five factories
4. Series A by Q4 2028

BEYOND CASH

Strategic build partners · shared space and events in new markets · data-centre and GPU alliances. Each opens a faster lane without changing how the platform is built.

12 · OUR SERIOUS COMPETITOR

Adidas built its own MiP (half-baked).

Built for Adidas only — sell it, and Nike and Under Armour copy it and the edge is gone.

It moves material from mills → factories → shipment → shop racks; it doesn't run the factory floor.

No AIoT · no Ai PAs · no Big Brain. Yai has all three.

ADIDAS MiP — THE STACK	WHAT IT DOES FOR ADIDAS	WHERE YAI IS DIFFERENT
AWS + SAP data lake	Adidas ERP and data lake in the cloud — analytics built 40× faster.	Runs in the factory — on a GX10 on the owner's desk. Data stays home.
o9 Solutions	Ai demand planning, allocation and replenishment for Adidas stores.	Plans the floor itself — line plan, master plan, capacity, live.
TrusTrace	Material traceability — 500 factories, 10,000 material suppliers.	One factory, every brand — the same floor data feeds each buyer.
project44	Ai visibility of shipments in transit (2026).	Sees it before it ships — cutting, sewing, QC, packing.
