The only commercial Ai-Native Manufacturing Intelligence Platform.

AIoT Sustainability Data Platform, Revolutionising the way compliance is done.

Legal EMS

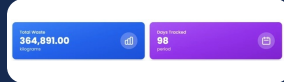

AI reviews every legal document and its supporting papers, and raises the non-compliance issues it finds.

Energy

Monitoring and reporting energy use from every source — down to the device that draws it.

Waste

The bag leaving the floor is logged on the pad mounted at the door — kilos and waste type, on the spot.

Water

AIoT water meters read the government supply coming in and what every department draws from it.

Waste Water

Substance sensors

Flow meter

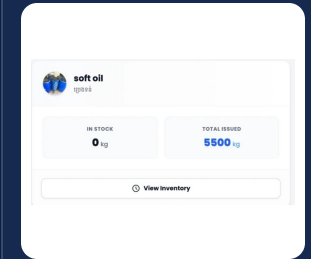

Sensors read the quality of the waste water; the meter reads how much of it leaves.

Air Emission

Sensors watch humidity, temperature and the gas types in the air, and report them as they change.

Chemical

Eco passports on file for every chemical, and stock controlled from the mobile app — issued, on hand, audit trail.
