01 / EXECUTIVE SUMMARY

Factory-tested for 5 years. Now opening the gates.

Yai is Ai MIP — Agentic Manufacturing Intelligence. A three-layer platform that modernises a production unit from a whole-paper operation into executive Ai. It replaces the chaos most factories live in today — paper reports, ledger books, scattered chat apps, manual signatures, staff chasing approvals floor-to-floor.

INDUSTRY EXPERIENCE —
TECHNICAL + MANAGEMENT

5 years inside live production facilities — proven on real factory floors before a single sales call.

02 / THE PROBLEM

Squeezed from three sides — internal, brands, government.

1 · INTERNAL WORKFLOW

The team is demanding better

“We can't keep chasing signatures floor-to-floor and living in ledger books. Give us one system.”

2 · BRANDS · THE CUSTOMERS

Ai everywhere, or lose the order

“Go agentic now — no more Excel, no more emails. The factories that integrate win the orders.”

3 · GOVERNMENT + AUDITS

Better compliance, on time

“Worker data, EMR reports, tax filings — submitted digitally, on time. Late or missing means penalties.”

THE OWNER · SANDWICHED BETWEEN ALL THREE

Stuck in the middle on paper — expected to satisfy internal teams, brand buyers, and government auditors, all with ledger books and chat apps.

LIFE ON PAPER TODAY:

Paper reports & ledger books · Scattered chat apps for approvals · Manual signatures every step · Staff chasing floor-to-floor · No single source of truth

03 / THE SOLUTION

An Ai platform that saves jobs.

1

Digitalization — centralised data

Excel dashboards and digital records flow into one database. Mobile apps, tablets, AIoT & scanners on the floor.

2

Ai Agentic — agents do the chasing, following & forecasting

10 Ai agents handle approvals, reports, compliance filings, chase-ups, and forward-looking forecasts across every module.

3

Full Ai — executive intelligence

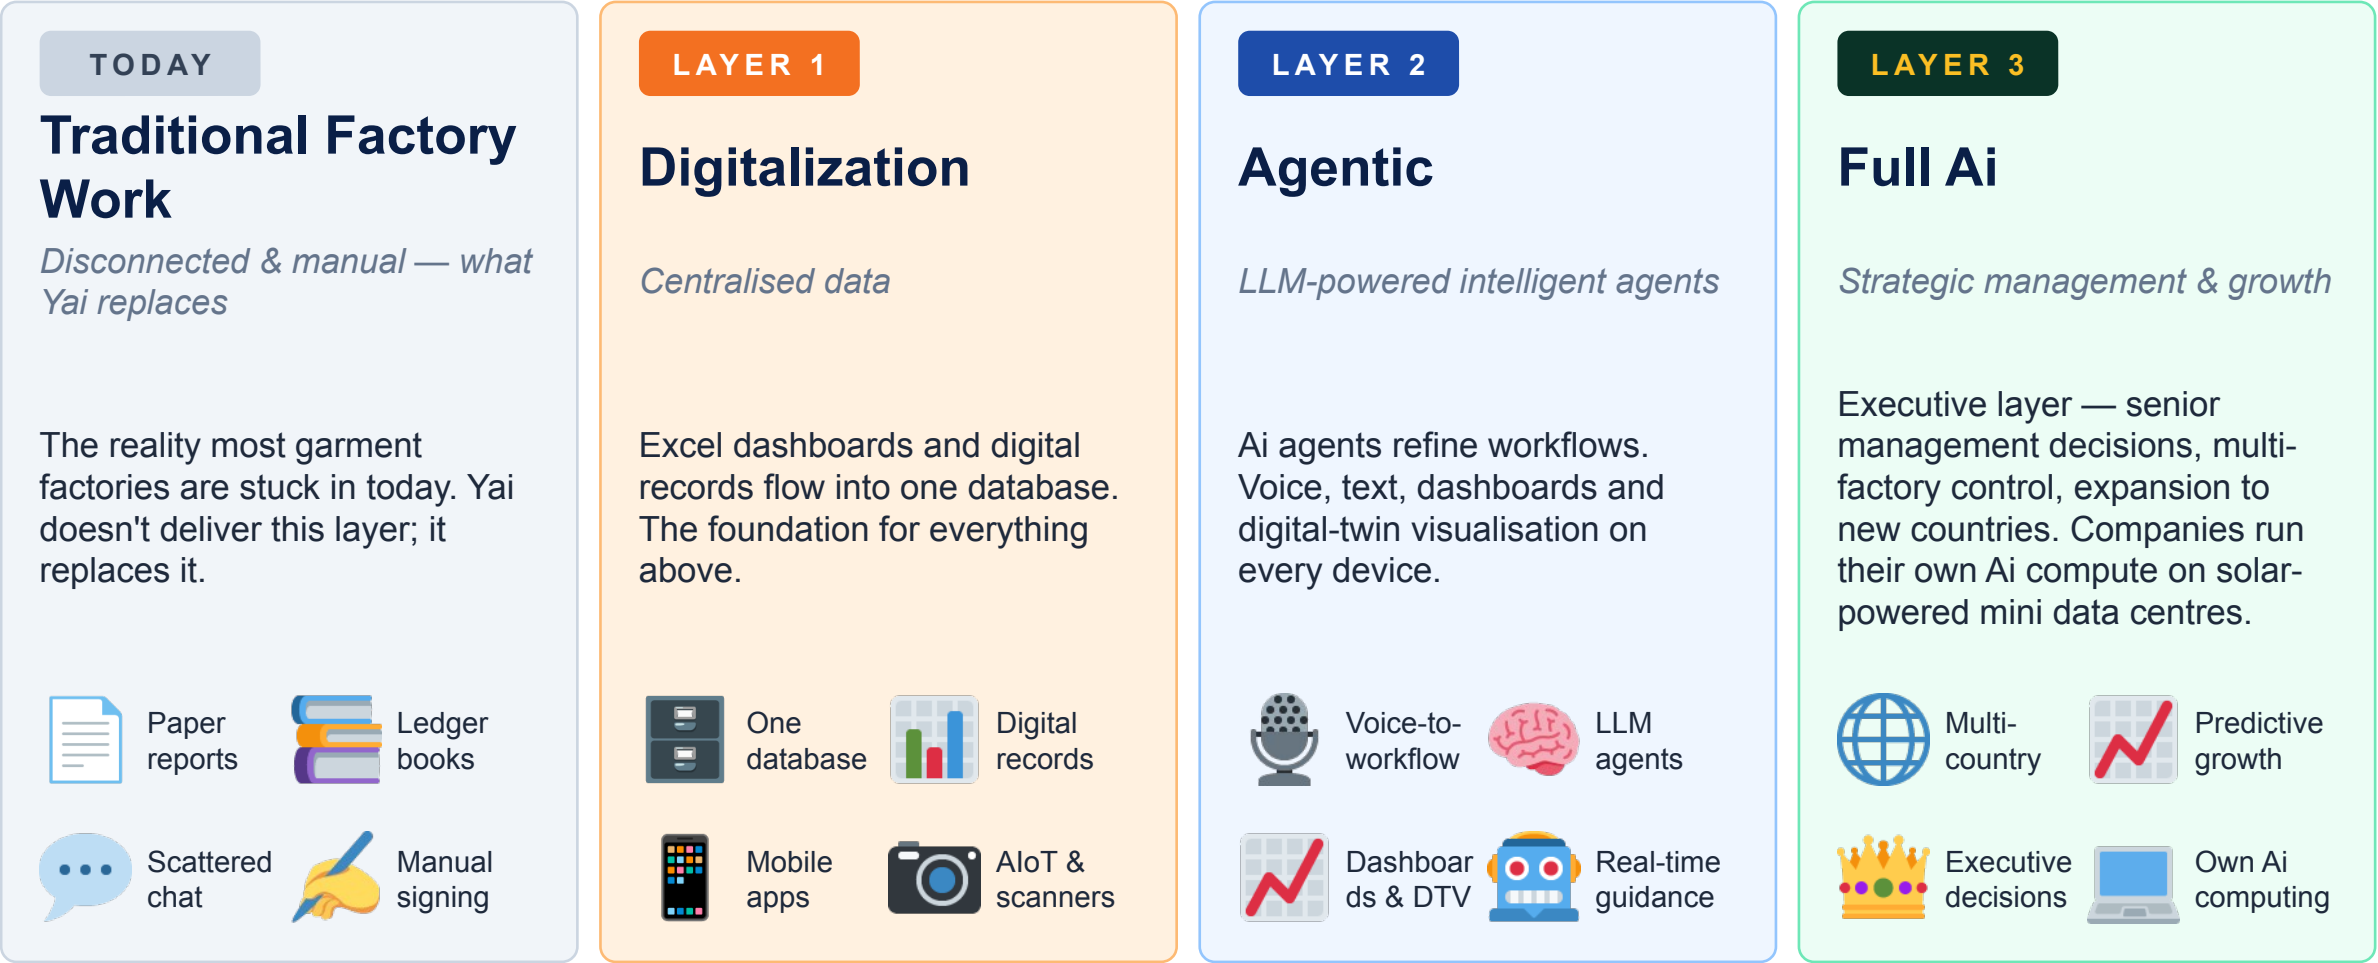

The Big Ai Brain: owner-level answers across 5 factories in 1 chat, in Khmer, Chinese or English.

WHY “SAVES JOBS”

Adopt one layer at a time — each builds on the one below, nothing gets ripped out. The same team steps up from paper to Digitalization to Agentic to Full Ai. The owner satisfies the brand and the ministry without replacing their people.

Mindset-shift sales: convincing factory mid + top management to climb the ladder.

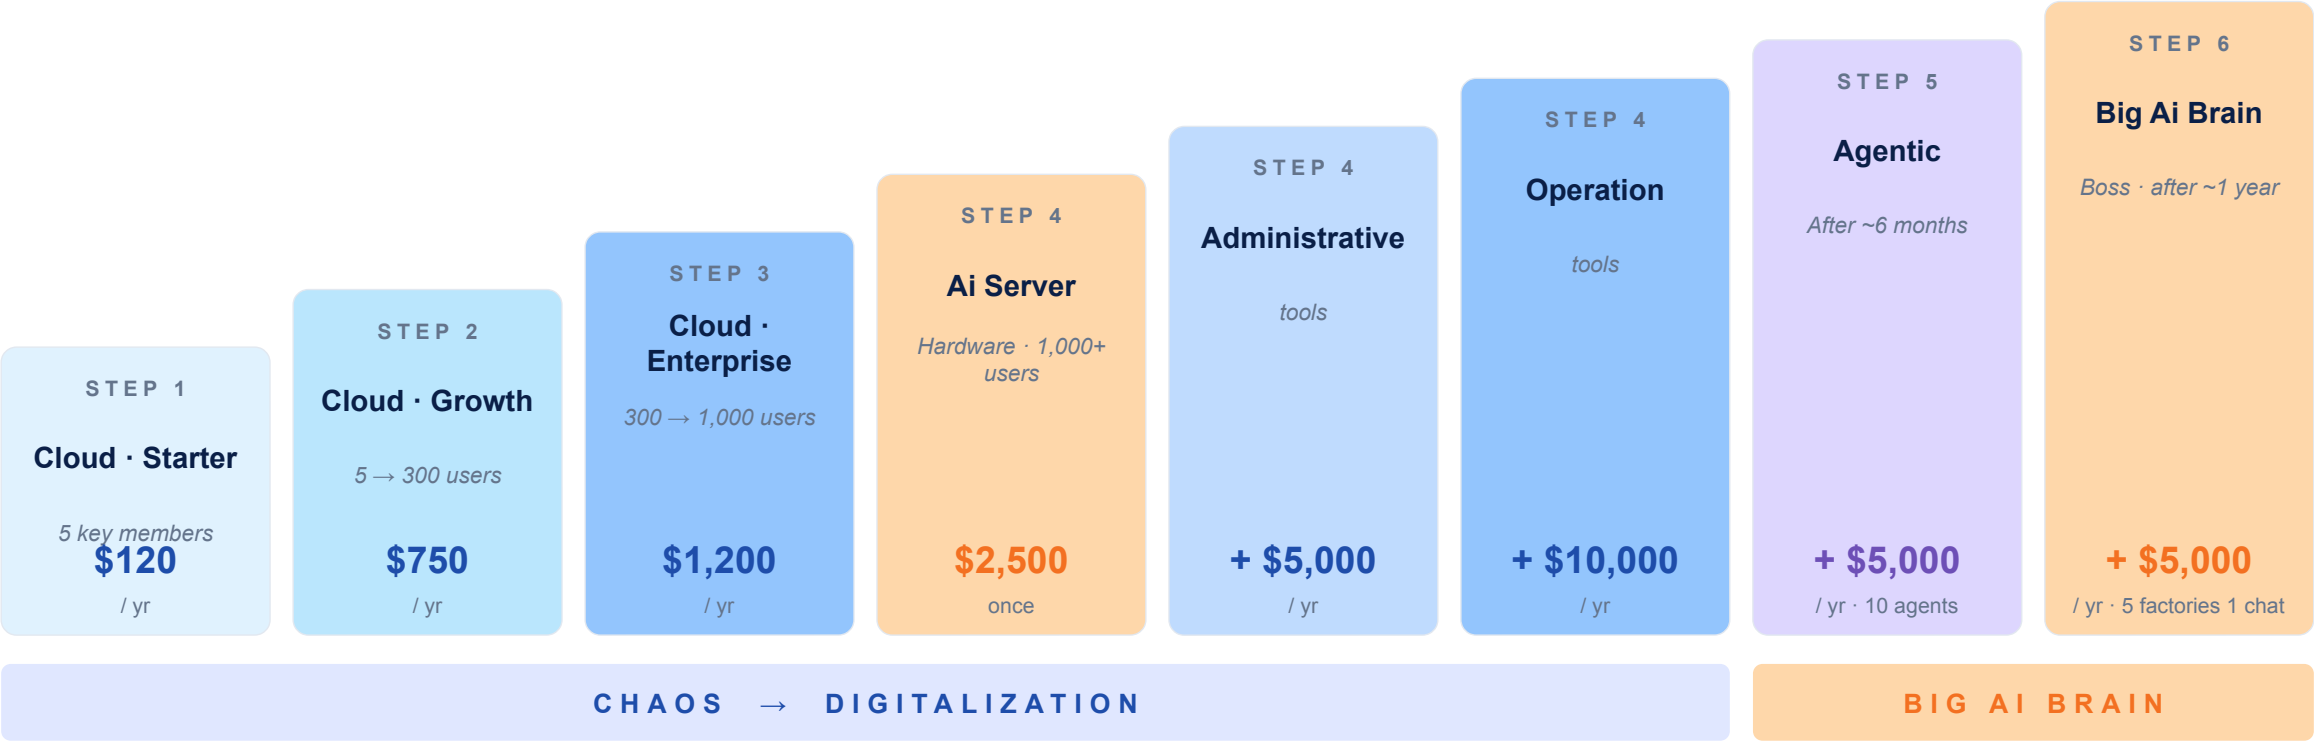

From paper to Full Ai — three Yai layers.

Adopt one layer at a time — each builds on the one below, nothing gets ripped out.

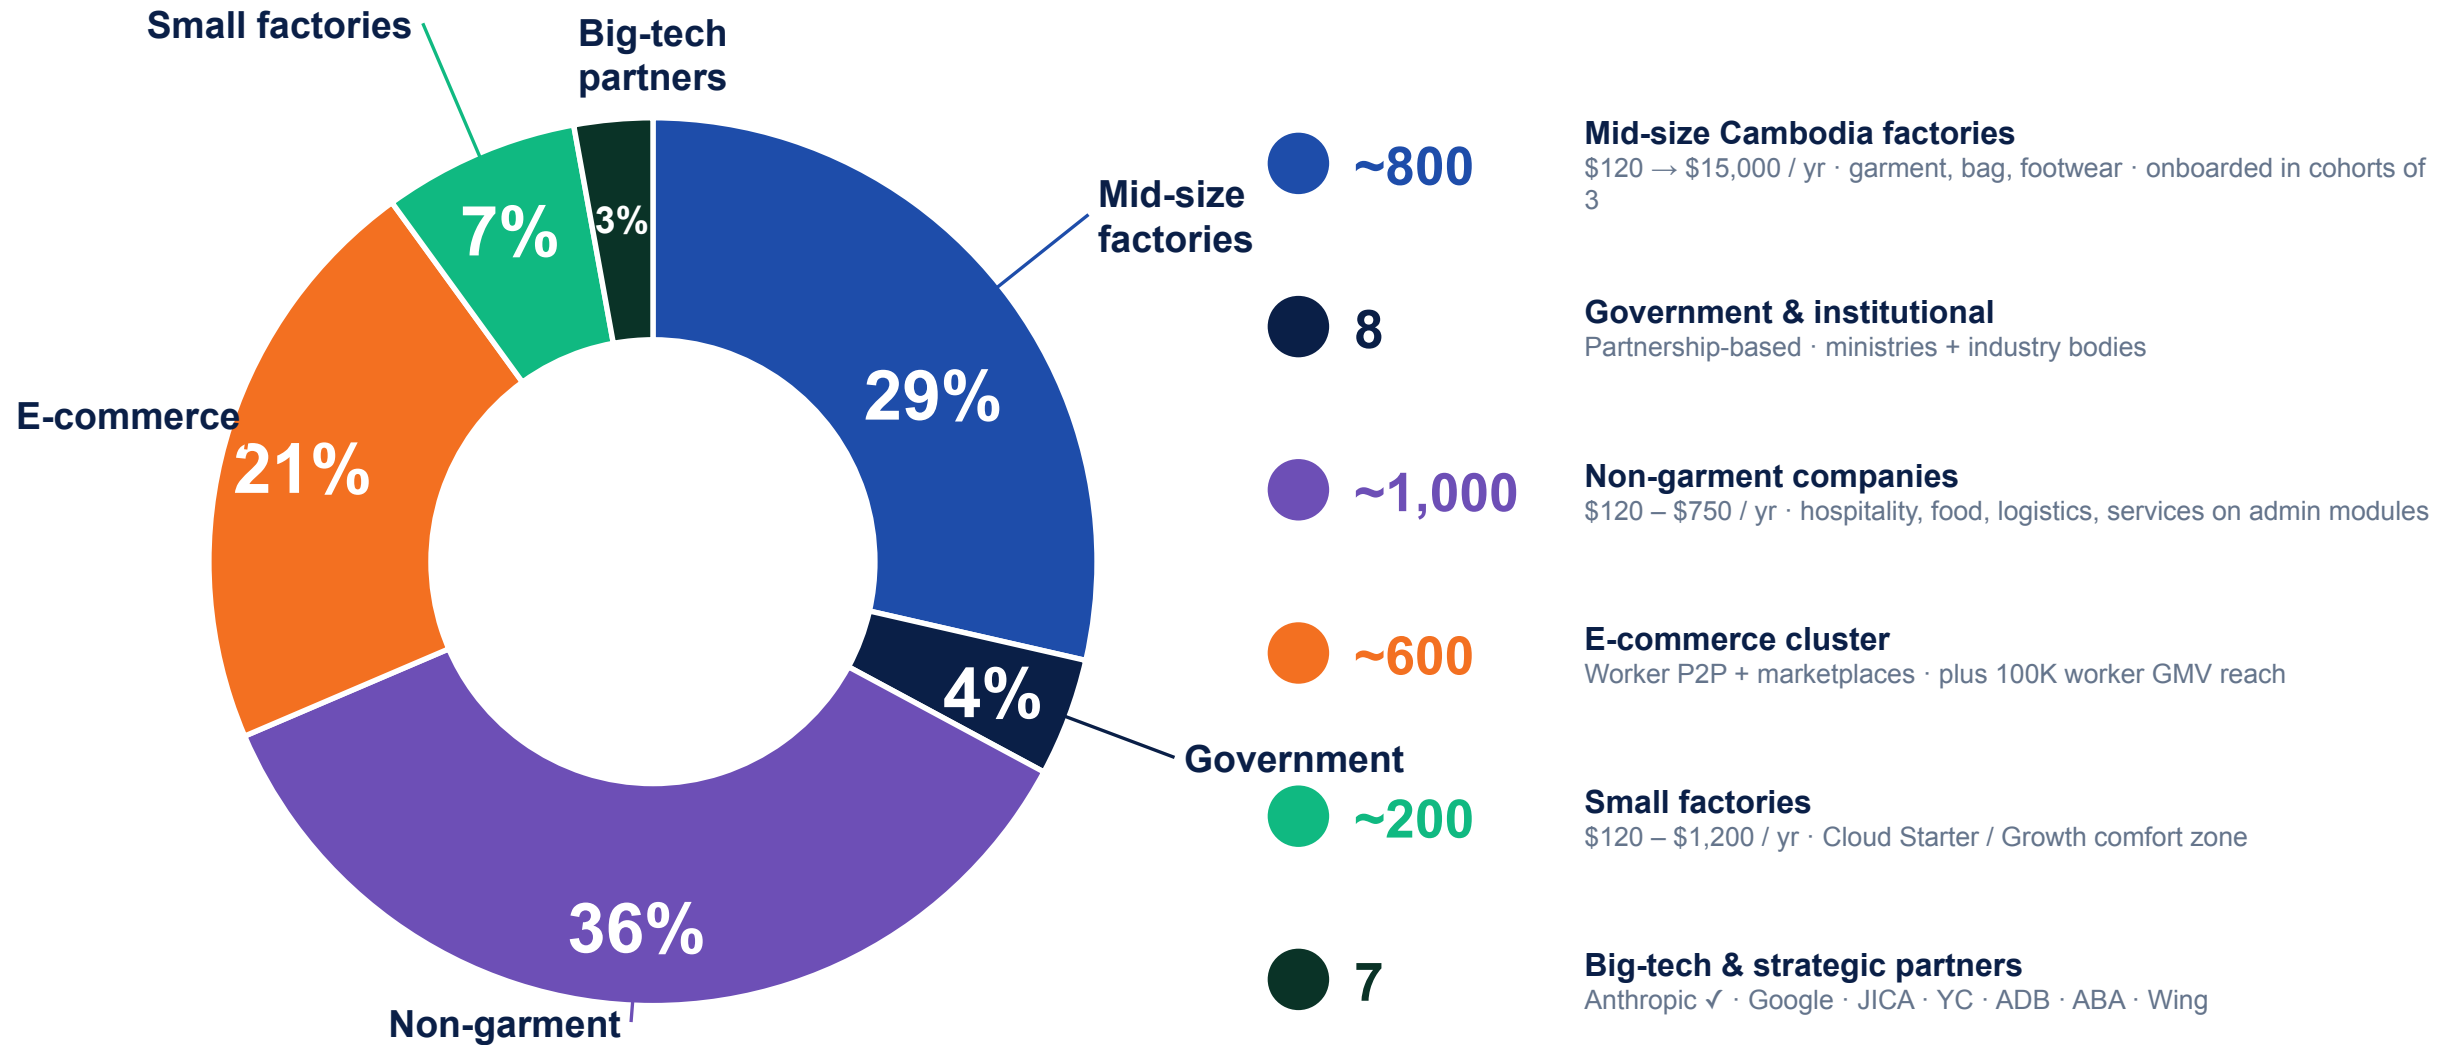

05 / PRICING & PACKAGING

Start \$120 · scale as the business grows.

+ 3 e-com streams (variable): Worker P2P Marketplace (take-rate/user · 100K workers) · Service Provider Marketplace (take-rate + listing · ~1,000 providers) · Factory Supply Marketplace (wholesale margin · 100 curated SKUs · \$100K GMV/mo)

Cambodia approach.

Three levers · both sides win.

1 STRATEGIC PARTNERSHIPS

Your external Ai dev team.

Direct commercial. Yai already ships 60+ applications. Enterprises tune them to their workflow; we become their external Ai dev partner on a monthly fee, and keep building. Predictable revenue for us, a live Ai team for them.

2 ACCESS & INTRODUCTIONS

Doors, spaces, cost-share.

Shared office space in new markets. Event access, with cost-share. Warm intros to institutions, governments, NGOs and funders. In return, we contribute real Yai work — a partnership deliverable, not a courtesy.

3 AI & DATA PARTNERSHIPS

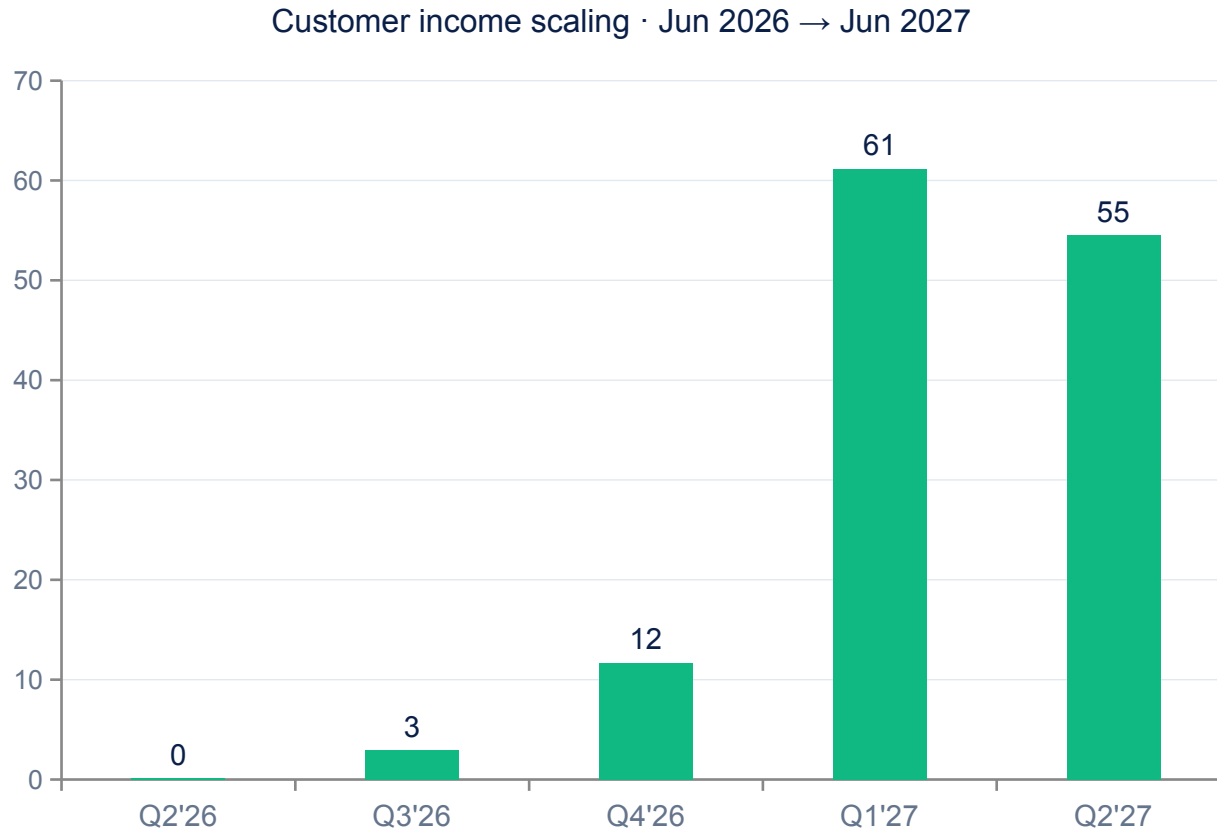

Data centres & infrastructure.

Partnerships with data-centre operators and infrastructure providers — GPU capacity, colocation, edge nodes. Host Yai's inference and training close to our factories, at economics that scale with us.

These three unlock speed. None require a change in how the platform is built.

10 / THE END GAME

\$205K in. Customer income scaling. A \$5–10M platform out.

INVESTED · END 2026

\$205K

17 module families · 10 agents · 3 platform layers · Cambodia team since May 2024.

PLATFORM VALUE

\$5M–\$10M

Same engineering cost in the US / EU / Singapore. A 15–28× structural advantage.

That's the end game — small investment, live customer income, a platform worth 25–50× what it cost to build.

Modernising the industry.

**Forty years of technical & management experience —
now powered by Artificial Intelligence,
on par with any tech industry.**
